

WaveShaper User Manual

AudioForge WaveShaper v1.0.0

Waveshaping distortion with multiple curve types

Overview

WaveShaper provides harmonic distortion through waveshaping with:

- **4 Curve Types:** Soft, Hard, Asymmetric, Fold
 - **Drive:** 0-100% (input gain before shaping)
 - **Mix:** Blend distorted signal with clean
 - **Output Gain:** Compensate for level changes
-

Quick Start

Subtle Warmth

1. **Curve:** Soft
2. **Drive:** 20-30%
3. **Mix:** 50%
4. Result: Gentle saturation

Heavy Distortion

1. **Curve:** Hard or Fold
2. **Drive:** 70-90%

3. **Mix:** 80-100%

4. Result: Aggressive distortion

Parameters

Curve Type

Soft: Smooth, tube-like saturation (odd harmonics)

Hard: Aggressive clipping (even + odd harmonics)

Asymmetric: Lopsided distortion (rich harmonics)

Fold: Wave-folding synthesis (metallic, harsh)

Drive

Range: 0-100%

Description: Input gain before waveshaping

- **0-30%:** Subtle warmth
 - **40-60%:** Moderate distortion
 - **70-100%:** Heavy distortion
-

Mix

Range: 0-100%

Description: Wet/dry blend

- **100%:** Full distortion
 - **50%:** Parallel processing
 - **0%:** Bypass
-

Use Cases

1. Bass Saturation

Settings: Soft curve, Drive 40%, Mix 70%

Result: Harmonically rich bass

2. Drum Crunch

Settings: Hard curve, Drive 60%, Mix 80%

Result: Aggressive drum punch

3. Creative Synthesis

Settings: Fold curve, Drive 80%, Mix 100%

Result: Metallic, synthetic textures

Tips

- Start with low Drive, increase gradually
 - Use Mix for parallel distortion (blend clean + distorted)
 - Try automating Curve type for dynamic changes
-
